Assignment No.2

Name :- Jadhav Yogita Maruti
Class :- MCA - III
Sub :- OT
Roll No. :- 18

Q.1 What is Transportation problem? Explain mathematical formulation of TP.

→ The transportation Problem (TP) is a special type of LP problem where the objective is to minimize the cost of distributing a single commodity from a number of supply sources (e.g. factories) to a number of demand destinations. The objective of the problem is to determine the amount to be trasported from each source to each destination so as to maintain the supply & demand requirements at the lowest trasportation cost. The characteristic of a TP are such that it is usually solved by a specialized method rather than by simplex method.

* Formulation of Transportation Problem :-

Transportation problem is an important class of the liner programming problem in which the objective is to transport various quantities of a single homogeneous commodity that are stored at various origins to different destinations in such a way that the total transportation cost is minimum.

Transportation Problem arises in situations involving physical movements of goods e.g. milk & milk products from plants to cold storages cold storages to wholesalers, wholesalers to retailers & retailers to customer. The quantity to be shifted from each plant to each cold storage so as to maintain the supply & demand requirements at the lowest transportation cost.

Q.2 Explain VAM.

→ VAM stand for Vogel's Approximation method is one of the methods used to calculate the initial basic feasible soln. to a transportation problem. However, VAM is an iterative procedure such that in each step, we should find the penalties for each available row & column by taking the least cost & second least cost.

Then

- Below are the steps involved in Vogel's approximation method of finding the feasible soln. to a transportation problem.

- Step 1 - Identify the two lowest costs in each row & column of the given cost matrix & then write the absolute row & column difference.
